

ISOBUS Joystick

JS-20

ISOBUS Control at your Fingertips

Specifically designed with the operator in mind, the Topcon JS-20 Joystick provides an intuitive tool to program many ISOBUS implement functions, enabling expansive and efficient control.

Compatible with all ISOBUS machines supporting auxiliary functionality (AUX-N), the joystick provides up to four working modes, each identified by a colored LED. Within each working mode, 11 assignments can be created, enabling up to 44 total implement functions. Switching working modes is simple and the assignments are also saved by machine. A single joystick can be used throughout the entire fleet, reducing costs.

Equipped with a trigger mechanism to eliminate mis-commands and a clean configuration interface, the JS-20 is the complete ISOBUS implement control joystick package.

Expansive ISOBUS implement control in an intuitive package

Easy to install, setup and use, reducing stress

Easily transferable across machines, reducing costs

ISO-UT compatibility for display flexibility

Complementary Products

Flexible Consoles
4" / 8" / 12" displays

Guidance
Manual and auto-steering solutions

Harvest Yield Monitoring
For grain crops and specialty crops

Boom/Tillage Height Control
Norac Height Control for consistent application

Seeding, Planting, Spraying, Spreading Control
Leading seeding, planting, spraying, spreading implement control

Crop Health Monitoring
Nutrient sensor for optimized and on-the-go application
